

DESCRIPTIVE ABSTRACT

Process and system for the construction of an edition layout

5

The present invention has for its object a process for the construction of an edition layout comprised by at least one sheet in which is displayed at least one visual element, information relating to said layout being stored in a database in the identified fields interconnected by connections, a visual representation according to the reality of at least one portion of said edition layout being adapted to be displayed by means of at least one visualization means.

15 Process characterized in that it consists in providing said at least one display of a visual representation in the form of a dynamic and interactive display permitting a modification by an intervener or user of the visual representation of the layout or a portion of the layout and in that it consists in providing an automatic control between said at least one visualization means (9, 10) and the database (8).
